General Notes:

1. A reference to a PD&E or Route study indicates that an exact alignment has been approved and reference to PD&E or Route study is for alignment purposes only. Proposed corridor width shall apply.
2. In absence of PD&E or Route study, the existing roadway centerline is the reference for Right-of-Way dedication.
3. Additional right-of-way may be required for pond and drainage mitigations according to PD&E and Route Studies. This additional right-of-way will be determined on a case-by-case basis in consideration of PD&E and Route Studies recommendations.
4. If the ultimate number of lanes and related required infrastructure (drainage, trails, sidewalks, transit lanes etc.) have been completed, the existing right of way shall be substituted for the proposed corridor width.
5. Constrained roadway segments were identified based on the level of development activity (measured in terms of existing structures or "built" environment) within the adjacent land uses, as well as review by County staff.
6. Additional right-of-way may be required at the intersections. The distance from which this additional width is required will be determined on a case-by-case basis in consideration of location-specific characteristics that may impact the specific design. These location-specific characteristics may include, but are not limited to, topography, roadway alignment, soil conditions, and historic and cultural sites that, on the basis of current professionally accepted design standards, may change the beginning and ending locations of the additional corridor width. In no case shall this additional corridor width be required for a distance greater than 2,640 feet from the closest point of the intersecting street right-of-way.
7. If the ownership of any State roadway segment is transferred to the County, the County right of way widths/cross-sections (for the applicable number of lanes in the Table) shall automatically apply to any segments transferred to the County, even if the Table has not been amended.
8. The Villages of Pasadena Hills (VOPH) and Connected City Master Roadway Plan requirements (i.e., number of lane and right-of-way width) supersede the requirements of this Table in the event of a conflict, unless the County has completed an approved PD&E or route study for such roadway.

Specific Notes:

9. Either Tower Road or Lake Patience Road (from Oakstead Blvd. to US 41) needs to be a 4-lane roadway. Whenever the County confirms that Tower Road is buildable to 4-lane, the ROW width along Lake Patience Road (from Oakstead Blvd. to US 41) will be 80 feet for a 2-lane roadway.
10. In order to maintain rural characteristic of the northeast Pasco County, Lake Iola and Blanton Road are not expected to require, nor they are planned to receive, capacity improvements. The capacity deficit will be addressed through parallel facilities, and alternative modes of transportation, to include transit, sidewalks, etc.
11. As Old Lake Land Highway is recognized as a constrained corridor on the eastern side, the additional ROW must be preserved or acquired entirely from the western side of the roadway.
